Nasturtiums besides being one of our best liked flowers, adapt themselves to conditions very readily and will grow in any moderately good soil in a well drained, sunny location. Plant them this year, for a fine showy garden.

Do not plant in soil that is too rich as it will cause too much foliage to be produced and few flowers. Rich soil will also cause dwarf varieties to produce runners.

Dwarf or Bush Nasturtiums_R

Giant Double Nasturtiums

Ever since the introduction of the Double Nasturtium Golden Gleam, gardeners everywhere have been eagerly awaiting more colors in Double Nasturtiums.

Last year Burpee created the Double Hybrid Nasturtiums at a cost of more than \$10,000, and was the only house in the world who had them to offer their customers. The supply of seed was limited, the price (10 seeds for \$1.00) seemed high, but the demand was greater than the supply. Large acreages were planted to Double Nasturtiums on our Floradale Farms in California last summer, and we are happy to say that we have a large quantity of Burpee's Double Hybrid Nasturtiums on hand and have greatly reduced the price.

At almost every Flower Show, Burpee's Double Hybrid Nasturtiums were given the highest award for the finest new flower. A noteworthy addition to the semidwarf Double Nasturtium class is Burpee's Double Scarlet. An entirely new dwarf type is offered for the first time

this year.

Burpee's Snapdragons

Snapdragons (botanical name, Antirrhinum) have always been universal garden favorites. They are fascinating flowers, with their interesting form and glowing colors. They are easy to grow and will bloom continuously until severe frost, making a wonderful display and supplying unlimited cut-flowers. Ordinary good garden soil will produce fine Snapdragons either in full sun or semi-shaded spots. Sow outdoors when danger of frost has passed, or indoors six weeks earlier.

To make selection easy we are using throughout our flower seed descriptions the following keys: R For the Rock Garden; Fine for Cutting; M For Moist Soil; D For Dry Soil; Does well in semi-shade; S For climbing on string, wire, or trellis.

New Majestic Snapdragons

This class is the very latest development in Snapdragons. Burpee's Famous Zinnias

You can always count on Burpee's Zinnias. They are easy to grow and will succeed almost anywhere. They flower profusely from midsummer until late autumn and offer a wonderful variety of forms that range from the giant Dahlia-Flowered type to the dainty Lilliputs, and that meet every garden need for beds, borders, and cut-flowers. The taller types, with their luxuriant foliage, are excellent as a back-

foliage, are excellent as a background for lower growing Zinnias or other annuals. And for colors, the modern Zinnias are a revelation. Not only do we have the yellows, reds, purples, and whites, but also various shades of rose, salmon, lavender, gold, and many more.

For the finest double flowers, plant in a sunny location in good soil, and water freely. Early blooms can be had by sowing the seed indoors about six weeks before outdoor planting time. Regular sowings should be made outdoors as soon as the soil is dry enough to be worked and all danger of frost has passed. Thin out or transplant, allowing 18 to 24 in. between the plants.

Scabious-Flowered Zinnias will give a note of distinction whether displayed in the garden or in vases. Pkt. 25%; $\frac{1}{8}$ oz. 55%; $\frac{1}{4}$ oz. \$1.00; $\frac{1}{2}$ oz. \$1.75.

Burpee's Unequalled Calendulas

Scotch Marigolds ©

The colorful flowers make a wonderful display in the garden, and are always admired by those who see them. Blooms freely in early summer and continues into the fall. Even though this plant prefers a sunny location and rather dry soil, it does well under widely different conditions, requiring little care to grow to perfection. 18 to 24 in. in height.

1799 Apricot Queen (New) This brilliant Calendula is worthy of heading our list, as the colorings are distinctly different from any before offered. Large, flat-petaled flowers of a bright apricot shade, deepening slightly towards the center. Brown eye. This variety should be grown by all. Pkt. $25 \not\in$; $\frac{1}{4}$ oz. $60 \not\in$; $\frac{1}{2}$ oz. \$1.00.

1822 **Lemon Giant** An outstanding color in Calendulas, being medium deep yellow with an attractive dark brown center. One of the largest and a variety that holds its color whether on the plants or when used for cut-flowers. Contrasts nicely with the darker colored varieties. Pkt. 25ϕ ; $\frac{1}{4}$ oz. 60ϕ ; $\frac{1}{2}$ oz. \$1.00.

1804 Masterpiece A variety of recent introduction and extremely popular on account of its color. The flower itself is large and heavy and of rich orange, with a very outstanding center of reddish orange-brown. Extra long-stemmed and of vigorous growth, being in bloom almost the entire summer. Be sure to include Masterpiece in your order this year. Pkt. 25¢; ¼ oz. 60¢; ½ oz. \$1.00.

1821 Orange Shaggy (New) Closely set, irregularly placed, long narrow petals, beautifully fringed or laciniated, giving the flowers the frilled or shaggy appearance of some Chrysanthemums. The large,

flat, rich orange flowers shade slightly lighter toward the medium closed center, the two-tone coloring being quite effective. Flowers are borne profusely on long stems, and its informal appearance and unusual form add to its decorative value when used for cut-flowers. Pkt. 25¢; ½ oz. 85¢; ½ oz. \$1.50.

1803 Orange Cockade We take pride in this selection as, though many new varieties have been raised in recent years, our Orange Cockade is still the largest, most double, and of the deepest color. Pkt. 15¢; ½ oz. 40¢; ½ oz. 70¢.

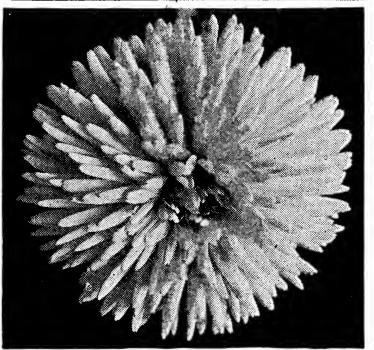

1785 Orange Giant A fine long-stemmed Calendula with very large flowers of rich orange color, with a lighter center. Although already well-known, this continues in great demand, as it is sure to bloom for a long season. Pkt. 25¢; ½ oz. 60¢; ½ oz. \$1.00.

Burpee's Glorious Asters

You may have a continuous succession of Asters from early summer until frost by planting early, mid-season, and late-flowering varieties. The Asters offered here will come into bloom in about the following order: EARLY—Queen of the Market, Royal, Imbricated Pompon; MIDSEASON—King, Astermum, Crego, California Giant, California Sunshine, Single Giants; LATE—American Beauty, American Late Branching, Mammoth Peony-Flowered.

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine and ample moisture. Plant in a different location each year.

Being long-stemmed and largeflowered—the individual blooms often measure 4 in. or more across—Astermums are particularly valuable for cut-flowers.

Larkspur is a favorite for its beauty in the garden and its effectiveness as a cut-flower. It is a quick-growing, easily raised, very freeflowering class, producing many graceful, erect spikes of gorgeous blooms during the whole summer. The varieties listed here are strictly annuals, distinct from the Delphinium or hardy Larkspur. Sow the seed any time in the spring—the earlier the better—where the plants are to remain, later thinning the seedlings to stand 8 to 12 in. apart. Larkspurs do well in almost any fairly dry soil and a sunny exposure. Blooms all summer.

Lilliput R

The plants of these new Lilliput Marigolds are quite dwarf, averaging but 8 in. in height. They are of very compact growth, forming neat, well-rounded bushes of even height. The foliage is exceedingly small, almost lace-like, adding greatly to the beauty of the plants. The flowers are quite small—hardly an inch in diameter—and of well-rounded, perfect form. They are produced with the greatest freedom well above the foliage from early midsummer until frost, far ahead of the dwarf French varieties, literally covering the plants. Unsurpassed for edgings and quite a gem for the rock garden.

2181 Brown A rich chestnut brown of great appeal.
2182 Golden Pure golden yellow shading to light orange.
2184 Sulphur Beautiful light, but rich, yellow.

2186 Yellow and Brown A charming color combination.

Burpee's Charming Pansies

2458 Sunnybrook Giants

This magnificent strain of Giant Pansies is outstanding for its range of colors, compact growth, and free-blooming character. The flowers contain an unusual amount of petal substance, so that the petals are not only thick but waved and frilled to the extreme. This gives the blooms a decidedly double appearance. Pkt. $40 \, \varepsilon$; 1/16 oz. \$1.00; 1/8 oz. \$1.75; 1/4 oz. \$3.25; 1/2 oz. \$6.25; oz. \$11.75.

2500 Mastodon Giants In this mixture of Giant Pansies we have a strain which shows a remarkable degree of heavy ruffling and crinkling. The flowers are very large and well shaped. They contrast well with the rich dark green foliage. The colors range from pure white to the deepest mahogany, including lovely lavender, rose, cerise, and light blue shades not found in any other strain. The plants are compact, bushy, and free blooming. Pkt. 35¢; ½6 oz. \$1.00; ½8 oz. \$1.75; ¼ oz. \$3.25.

2420 Extra Fine Bedding Pansies, Mixed Where size of bloom is of minor importance and a mass effect of color is desired, this mixture will be found most satisfactory. Pkt. $10\,\text{¢}$; $\frac{1}{8}$ oz. $30\,\text{¢}$; $\frac{1}{4}$ oz. $50\,\text{¢}$; $\frac{1}{2}$ oz. $85\,\text{¢}$; oz. \$1.50.

Pansies always have been a great specialty with us and we pride ourselves on the quality and trueness to type of Burpee's Pansies. Our list includes all the finest strains and separate varieties wanted by American gardeners. You can depend upon them.

2454 Oregon Giants

This strain of Pansies, which originated in Oregon, distinguishes itself by being extra long stemmed. The flowers are somewhat more flattened than those of other Giant Pansies, but this characteristic adds considerably to the size of the blooms, which, if well grown, measure 4 in. across. The originator exhibited such blooms at the Oregon Flower Show. A gracefully waved edge adds beauty to the otherwise flat blooms. Includes a wonderful range of colors. Pkt. $50 \not\in$; 1/16 oz. \$1.10; 1/8 oz. \$2.00; 1/4 oz. \$3.75.

2465 Giant Maple Leaf Mixed

(New) Great claims are made for this new Pansy which is entirely distinct from other types. With ordinary cultivation and care the flowers will often measure up to 4 in. in diameter. The leaves are also of enormous size, making a most unusual plant. The color ranges from the darkest to very light shades, and many likeable shades are included. The texture of the blooms is unusually good and the flowers themselves are of wonderful substance. Plants are very compact growing. Pkt. $40 \, \text{¢}$; $\frac{1}{16}$ oz. \$1.10; $\frac{1}{8}$ oz. \$2.00; $\frac{1}{4}$ oz. \$3.75; $\frac{1}{2}$ oz. \$7.00.

2463 Giant Ruffled Masterpiece

This European type of Pansy enjoys the greatest popularity all over the world. It belongs to the crinkled and heavily ruffled type, and the blooms have so much substance as to appear almost double. The color range is very beautiful and runs toward the rich and deeper shades. Pkt. $20 \, \frac{1}{16}$ oz. $40 \, \frac{1}{8}$ oz. $70 \, \frac{1}{4}$ oz. $1.25 \, \frac{1}{2}$ oz. $1.25 \, \frac{1}{2}$

2461 Bugnot, Giant Blotched

Large round flowers in many beautiful colors. In this type the blotches are not well defined on the edges but radiate into the margin of the flowers, giving a charming effect. Pkt. $15\,\rlap/e$; $1/\rlap/e$ oz. $45\,\rlap/e$; $1/\rlap/e$ oz. $80\,\rlap/e$; $1/\rlap/e$ oz. 1.35; $1/\rlap/e$ oz.

2452 St. Knud

(New) Large flowers, $2\frac{1}{2}$ to 3 in. in diameter, of perfect form, heavy substance and borne on long, strong stems. A bed of Pansies in a single color is indescribably beautiful, and in the new St. Knud you have just what you have been looking for—a clear, deep golden orange without spots or eyes. A prolific bloomer; so many flowers open at one time as to nearly cover the plant. The long stems make this a desirable variety for cut-flowers. Pkt. $20 \, \varepsilon$; $\frac{1}{8}$ oz. $70 \, \varepsilon$; $\frac{1}{4}$ oz. \$1.25.

Burpee's Charming Pansies

2513 Burpee Blend of Giant Fancy Pansies

There are few flowers in which quality of the strain counts as much as in Pansies. We believe that the Burpee Blend of Giant Fancy Pansies deserves to be placed at the head of our list because it is a mixture that has been selected with the utmost care and discrimination. It contains the largest and most beautiful of all blotched Pansies. They are heavy, thick, well waved, and crinkled at the edges. Pkt. $35 \, \varepsilon$; $\frac{1}{16}$ oz. $85 \, \varepsilon$; $\frac{1}{8}$ oz. \$1.50; $\frac{1}{4}$ oz. \$2.75; $\frac{1}{2}$ oz. \$5.25.

Trimardeau or Giant Pansies

This type of Pansies enjoys great popularity everywhere. The plants are compact, free blooming, of neat habit, and very hardy. The large flowers are borne on strong, stiff stems, long enough for cutting. Excellent for beds and edgings where certain colors or color combinations are desired.

2443 Black King This is a unique Pansy with deep purplish black flowers of a soft velvety texture. Combines well with yellow, white, or both. Pkt. 10%; 1% oz. 35%; 1% oz. 60%; 1% oz. \$1.00.

2422 Cardinal Bright cardinal-red blooms shaded with a rich tone of brilliant mahogany-red toward the center. The well-defined dark blotches on the three lower petals add good contrast. Pkt. 10¢; $\frac{1}{8}$ oz. 50¢; $\frac{1}{4}$ oz. 85¢; $\frac{1}{2}$ oz. \$1.50.

They do best where they get full sunlight all day. Beans are one of the most satisfactory and productive vegetables because they grow so vigorously and bear with such wonderful abundance. Plants of the Bush Beans range from 15 to 20 in. tall. Seed cannot be sown until the weather is quite warm. In the vicinity of Philadelphia, early May is about the right time for the first sowing of Bush Beans. The early varieties mature in from 45 to 65 days. To provide for a continuous supply, seed should be sown every 10 to 14 days up to August 10th. Plant in rows not less than 18 in. apart, cover with 2 in. of soil, and firm the surface to assist germination. One pound of seed sown thinly fills a row 250 ft. long; usually 90 lbs. of seed are sown per acre.

SHELL BEANS For use as Dried Beans during the winter season

Extensively grown everywhere for use as dried beans. The small-seeded varieties, like Robust Pea Bean, are sown at the rate of 30 to 45 lbs. per acre. The larger-seeded varieties require 60 to 75 lbs. per acre; 1 lb. for 150 to 200 ft. of row. Shell Beans possess high nutritive value, due to their large percentage of protein. In addition to the varieties listed below, the seeds of any of the other beans offered by us can be used for baking, though the white-seeded varieties are very much more preferred for this purpose due to their attractive appearance. Shell Beans should be left on the vines until they are thoroughly matured and dried out before they are put away for winter use.

Burpee's Pole Beans seeded

Pole Beans are extremely productive. They come into bearing later than the Bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy than Bush Beans and are therefore planted a week later. They mature in from 65 to 75 days. Sow the seed when the weather has warmed up, about the second week of May and not later than June 15. Set poles 4 ft. apart and place 8 to 10 beans around each; 1 pound of seed for 125 poles. When plants are well established, thin to 2 or 3 plants to a pole; or the seed may be planted along a trellis, sowing 300 ft. of row with 1 lb. of seed. Pick the beans before they have reached full size.

New Pole Lima Bean 105 **Burpee's Best O**

See Back Cover for Colored Illustration

A vigorous and rapid grower, producing a continuous setting of pods until frost. First pickings are ready almost as early as Fordhook Bush Limas

A sensational new pole lima that combines the distinctive qualities of Fordhook Bush Lima with an enormous yield surpassing the heavy production of other pole limas. The lustrous green glossy pods contain four or five and sometimes six big thick beans of green color. The pods are straight, five to six inches long, one and one-half inches wide, fully three-quarters of an inch thick, and grow four to eight in a cluster. The beans are exceptionally tender and have the fine nutty flavor of Fordhook.

Burpee's Best is an extremely vigorous, strong-growing plant and a natural climber. It will climb to a height of ten or fifteen feet, with pods

in clusters the entire length of the runners. Easy to pick and to shell—a quick basket filler. Has remarkable long-distance shipping qualities and an attractive appearance and wins a price preference over all other varieties in the lima bean markets.

You will find in this bean a double advantage. On account of the large size and growth of the plants, less seed is required, and a greater yield is returned. Burpee's Best has proved its capacity to produce as much as eight tons of green beans per acre.

Burpee's Best is the best pole lima of the Fordhook type for either the market or the home garden. Pkt. 25%; ½ lb. 40%; lb. 75%; 2 lbs. \$1.30; 5 lbs. \$2.75; 10 lbs. \$5.00, postpaid.

New Pole Lima Bean Burpee's Best

Burpee's Bush

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm. The middle of May is usually safe in the vicinity of Philadelphia. Bush Limas are good yielders, maturing in from 65 to 90 days, according to the variety. Plant in a warm, well-drained, sandy loam. Stick the seeds edgewise, eye down, 5 in. apart in the row, and cover 2 in. deep with fine soil. Later thin to stand 15 to 18 in. apart in the rows. One pound will sow 150 ft. of row. Keep the soil well cultivated, and pick the pods as soon as the beans have reached edible size.

63 Burpee's Improved Bush Lima O

Large Podded. Uniform, vigorous, and upright growth

A wonderful improvement over the original Burpee Bush Lima—larger pods, bigger beans, greater yield, and fully 8 days earlier. The pods are enormous, borne profusely in clusters of from 5 to 8, and crowded with four or five appetizing beans. Burpee's Improved Bush Lima is the largest podded and most prolific of the Bush Limas. The pods are 5 to 6 in. long; 1¼ in. wide. Even when fully matured the beans are of luscious flavor. The plants make a uniform, vigorous, upright growth, with heavy foliage. The pods are borne in clusters held well above the foliage. Full-grown bushes measure 30 in. in height and 24 in. across the top. Matures in 85 to 90 days after sowing. Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.45; 10 lbs. \$2.70, postpaid.

60 Burpee's Bush Lima

This is the original dwarf, large-seeded Bush Lima as first introduced exclusively by Burpee in 1890.

It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each plant develops into a rounded plant about 2 ft. in diameter. Pkt. 10¢; ½ lb. 20¢; lb. 35¢; 2 lbs. 65¢; 5 lbs. \$1.40; 10 lbs. \$2.60, postpaid. Not prepaid. 15 lbs. \$3.00; 25 lbs. \$4.75; 50 lbs. \$9.00; 100 lbs. \$17.00.

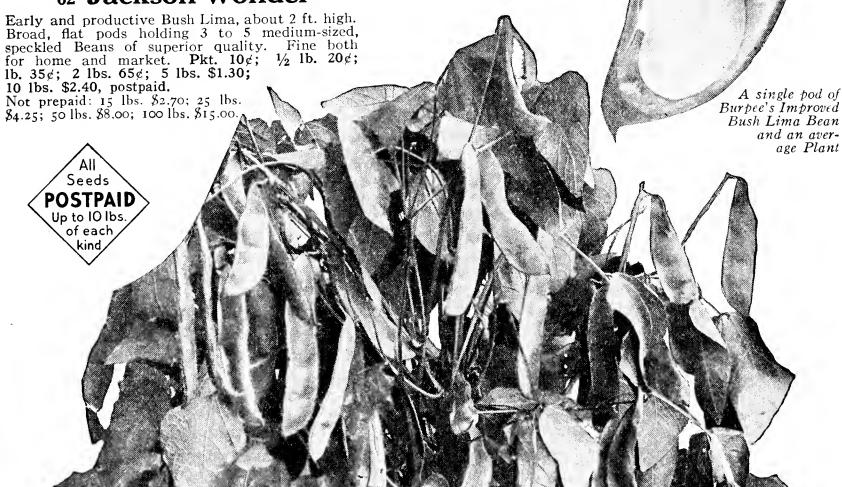

68 Wood's Prolific

Burpee's Delicious Beets

Make repeated sowings throughout the season. Start the first sowing early in the spring as soon as the ground can be worked. Follow this with other sowings made 3 to 4 weeks apart up to the end of July. Early in July make a large sowing to produce full-size roots for winter storing. Gather the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth. Place the rows 12 in. apart and use one oz. of seed for 100 ft. of drill. Thin to stand 3 to 4 in. apart before the plants begin to crowd. 4 to 6 pounds of seed are needed to sow one acre in drills. The early varieties mature in 45 to 50 days; the midseason and late varieties require 60 to 65 days.

128 Burpee's Improved Blood O

An early variety which matures a few days after Burpee's Extra Early but excels it in color and is of even finer and sweeter flavor. The roots are round but sometimes inclined to be deeper than their diameter. The flesh is a beautiful dark red color which is well retained when the Beets are cooked. Though it is a quicker grower, the roots will keep a long time in storage. A splendid variety for the home garden and for market. We recommend Burpee's Improved Blood as being dependable in every way. Grows 3 to 4 in. in diameter. Pkt. 10¢; oz. 15¢; 4 ozs. 40¢; ½ lb. 60¢; lb. 95¢; 2 lbs. \$1.70; 5 lbs. \$4.05; 10 lbs. \$7.10.

125 Boston Crosby or Early Wonder o

Very uniform, with deep purplish red flesh and slight lighter zones. 3 in. in thickness. This is a popular variety with gardeners everywhere as its smooth skin and uniform shape commend it to everyone. Second-early or main-crop garden Beet. It is of attractive turnip shape, growing 3 to 4 in. thick with a broad shoulder but quickly tapering in the lower portion. Smooth, deep red skin and beautiful deep blood-red flesh. Tender, and of the richest flavor; always stays in the finest condition and does not get stringy or tough when old. The Beets can be used early in the season when partially grown or may be left to reach full size. Pkt. $10 \, \text{¢}$; oz. $20 \, \text{¢}$; 4 ozs. $50 \, \text{¢}$; $\frac{1}{2} \, \text{lb.} \, 75 \, \text{¢}$; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50; 10 lbs. \$10.00.

116 Ohio Canner

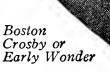

A selection made by the Ohio Agricultural Experiment Station for the purpose of supplying a Beet especially suitable for canning, and the result is more than was expected. The foliage is short and of a reddish green color. The roots vary slightly in shape—some are more flattened and others somewhat round. The skin is smooth and very dark red. The color of the flesh is extremely dark and shows hardly any zones. It is classed as a late Beet, requiring a week or ten days more than Detroit Dark Red to reach maturity. Pkt. 10¢; oz. 20¢; 4 ozs. 50¢; ½ lb. 80¢; lb. \$1.35; 2 lbs. \$2.50; 5 lbs. \$5.95; 10 lbs. \$10.80.

Unusual Varieties—Cabbage

174 Wisconsin Hollander

(L) This late Cabbage belongs to the "Yellows-resistant" group and has become a foremost variety in sections where this disease prevents growing of non-resistant Cabbage. It has been developed from the famous Danish Ballhead but requires about 10 days longer to come to maturity. The plants are larger than Ballhead, and where conditions are favorable, will produce a heavier yield per acre. When fully mature the heads are sometimes slightly flattened on top. Pkt. 15¢; oz. 40¢; 4 ozs. \$1.15; ½ 1b. \$1.90; 1b. \$3.50; 2 lbs. \$6.50; 5 lbs. \$15.75.

199 Burpee's Short Stem Drumhead

(L) Of dwarf compact growth with little outer foliage. The leaves curve inward over the flattened heads. It is an excellent variety for fall and winter. It is grown in certain sections to the exclusion of all other varieties for making sauerkraut. Stored during winter, it will keep in perfect condition until early in the spring. Pkt. 5¢; oz. 25¢; 4 ozs. 75¢; ½ lb. \$1.15; lb. \$2.00; 2 lbs. \$3.70; 5 lbs. \$9.00.

201 Burpee's Late Stonehead

Wisconsin Hollander

(L) A big, firm-heading Cabbage, "Solid as a stone." Makes a large spreading circle of blue-green outer leaves surrounding a most attractive rounded head with flattened top. It is a foremost late fall and winter variety which will keep well in storage throughout the winter until late spring. Splendid for home use, market, and for making into kraut. Pkt. 10¢; oz. 35¢; 4 ozs. \$1.00; ½ lb. \$1.65; lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

Chinese or Celery Cabbage

Chinese Cabbage may be served like Lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary Cabbage. Where summers are cool it may be sown in spring, but in the vicinity of Philadelphia seeds sown early in August have proved to give the best results. Makes full-size heads in 55 to 70 days after sowing. May be stored for about two months. Ask for free cultural directions.

214 Chihli

A wonderful variety and one that deserves to head our list as it is an early and sure-heading Chinese Cabbage, growing 18 to 20 in. tall and about $3\frac{1}{2}$ to 4 in. thick. The firm, well-blanched heads taper near the top. Pkt. 10e; oz. 30e; 4 ozs. 90e; $\frac{1}{2}$ lb. \$1.40; lb. \$2.50; 2 lbs. \$4.65; 5 lbs. \$11.25.

212 Pe-Tsai

Large, light green outer leaves. The thick, pure white heart is tender, juicy, and has an agreeably pungent flavor. Makes larger heads than Wong Bok described below. Do not sow seed too early if you wish good plants. August first is early enough. Pkt. $10\,\text{¢}$; oz. $25\,\text{¢}$; 4 ozs. $75\,\text{¢}$; $\frac{1}{2}$ lb. \$1.15; lb. \$2.00; 2 lbs. \$3.70; 5 lbs. \$9.00.

Burpee's Tasty Carrots

Sow the seed thinly in shallow drills early in the spring in rows not less than 12 in. apart. Make succession sowings every two weeks up to the early part of July. When well started, thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest Carrots. Cultivate throughout the season to insure smooth straight roots. For winter storing, sow a long row about the middle of June which will make full size roots before cold weather sets in. One ounce of carrot seed will sow 250 ft. of drill. 3 lbs. of seed is required to drill one acre. The early varieties mature in 60 to 65 days after sowing. The midseason Carrots require 65 to 75 days and the late varieties 75 to 85 days to come to maturity.

Burpee's Finest Celery

Burpee's Golden Self-Blanching

262 Burpee's Golden Self-Blanching O

Selected French-Grown Seed: Original Dwarf Strain

(E) There are many growers who insist on having the original French-grown seed of this foremost Celery though it is somewhat more expensive than the American-grown seed. The plants make a compact dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The quality of this variety is superb. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor. It is a standard market and shipping variety, growing 14 to 18 in. tall. Imported seed grown specially for us in France. Pkt. $20 \, \sharp$; $\frac{1}{2}$ oz. $60 \, \sharp$; oz. \$1.00; 4 ozs. \$3.00; $\frac{1}{2}$ lb. \$5.50; lb. \$10.00.

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. They will be ready for setting in rows in July. Celery requires a rich, well-manured soil and plenty of moisture so that it can make a continuous growth. Soil, boards, or paper cylinders may be used to blanch the stalks. One oz. of seed is sufficient for 600 ft. of drill. One oz. sown in the seed-flat gives 8,000 to 10,000 good strong plants; 2 ozs. are needed for planting one acre.

The early (E) varieties of Celery mature in about 120 days from the time the seed is sown. They are adapted for starting indoors, or outdoors when the ground is fit for planting. The late (L) Celeries need 140 days to come to maturity. They are planted extensively for late fall use and winter storing, although many of the early varieties also store quite well.

260 Golden Self-Blanching

(E) This is the American-grown seed produced from the dwarf French-grown stock. It exhibits all the excellent qualities of the original and is sown extensively by home gardeners as well as by market growers. The dwarf compact plants are heavy and solid. The heart is large, tender, well blanched, solid, and has a delightful nutty, crisp, and juicy flavor. It will yield a good crop of attractive Celery if grown under average conditions suitable for this crop. Pkt. $10 \, \sharp$; $1/2 \, 0z. \, 25 \, \sharp$; oz. $45 \, \sharp$; 4 ozs. \$1.35; $1/2 \, 1b. \, \$2.45$; lb. \$4.50.

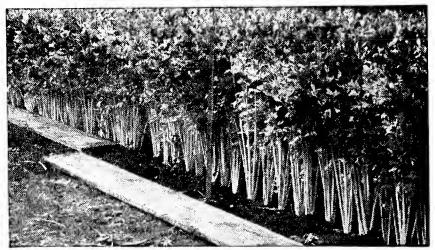

268 Golden Plume O

(E) This is also called Wonderful, a name that is most appropriate for this splendid early variety. Some gardeners consider it the best early Celery in existence. It is quite resistant to blight and rot and possesses very good storing qualities. The plants are of medium size, stocky, compact, and have a thick, full, creamy heart. The stalks blanch readily and are of excellent table quality. It resembles Golden Self-Blanching but is earlier, larger, and of more vigorous growth. A fine variety for the home and market garden. Pkt. 15¢; ½ oz. 35¢; oz. 60¢; 4 ozs. \$1.80; ½ lb. \$3.30; lb. \$6.00.

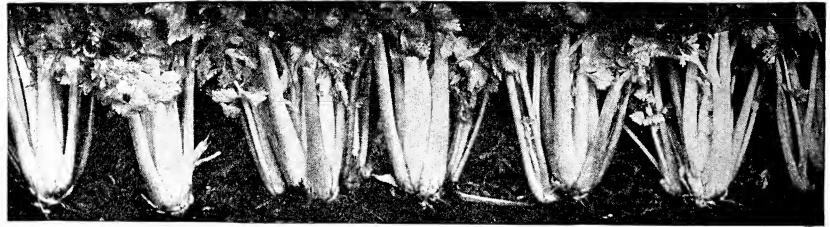

282 Giant Pascal O

Large, Thick, and Brittle Stalks

(L) Immense, light yellow stalks which will keep in perfect condition throughout the winter. Considered by many the standard winter Celery. The plants are productive, with tall upright leaves of a rich dark green color. The stalks are tall and thick. They are broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. It will keep in perfect condition throughout the winter months. Pkt. 10¢;

272 Burpee's Fordhook O

The Most Solid, Crisp, Tender, and Finest Nut-Flavored Celery in Existence

(L) Burpee's Fordhook Celery is, without question, the finest fall and winter variety in existence. The plants are stocky and compact, averaging 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a small tender heart in the center. They are extremely thick, measuring over ½ in. in diameter. Always they are tender, crisp, and juicy. Fordhook Celery will keep in perfect condition throughout the winter. Pkt. 25¢; ½ oz. 45¢; oz. 75¢; 4 ozs. \$2.25; ½ lb. \$4.10; lb. \$7.50.

275 Winter Queen (L) One of the finest dwarf winter Celeries we have ever grown. It resembles Golden Self-Blanching in height and habit, but the leaves are a rich green color and in this respect are not unlike those of Giant Pascal. As it blanches quickly it is ready for home or market much earlier in the fall. The plants make large bunches of extra-heavy stalks with very large, tightly folded hearts. Pkt. 5e; $\frac{1}{2}$ oz. 20e; oz. 30e; 4 ozs. 90e; $\frac{1}{2}$ lb. \$1.40; lb. \$2.50.

266 White Plume (E) The earliest and the most easily blanched of all Celery varieties, at its best right after digging but does not keep well. The foliage is an attractive light green tinted with

white. When blanched, the stalks are pure snowy white. They are tender and crisp, without any fiber or strings. Their flavor is rich and nutty. Highly recommended to home gardeners, and of decided value to market growers who are interested to benefit from the early high market prices. Pkt. 10ξ ; $\frac{1}{2}$ oz. 20ξ ; oz. 35ξ ; 4 ozs. \$1.00; $\frac{1}{2}$ lb. \$1.65; 1b. \$3.00.

Good Keeper; Fine Flavor; Crisp and Brittle

(E) This is a midseason or second-early Celery which will be ready for use soon after Golden Self-Blanching. It resembles Golden Self-Blanching in size and general characteristic of growth, but the foliage is a beautiful bright rich green. The plants make a vigorous, upright yet compact growth, and the stalks are easily blanched to a beautiful pure white color. They are thick, solid,

heavy, unusually meaty, pure white, crisp, altogether free from any fiber or strings, and of extra fine flavor. Easy Blanching has desirable blight-resistant qualities and has proved to be

hardier than Golden Self-Blanching. While it is a midseason Celery, it also stores well throughout the winter.

Celeriac

or Turnip-Rooted Celery

293 Giant Prague Gradu-ally more and more gardeners are becoming acquainted with this splendid vegetable, which is much easier to grow than Blanching Celery. The edible portion is the large thick root, which is highly valued boiled, or is used in vegetable soup stews, and other dishes. Celeriac grows best in a moderately moist yet well-drained soil which is fairly rich in barnyard manure. Frequent cultiva-tion and occasional thorough watering are necessary. When planted on too heavy, as well as freshly and excessivemanured soil, the tubers will grow to enormous size; the quality, however, will be rather inferior as the tubers will become stringy. Start the seed in boxes indoors and when the seedlings are large enough to be handled, transplant into the garden to stand about 8 to 10 in. apart each way. Use when the roots are of moderately large size. Does not require blanching.

253 Burpeeana O

(E) This is Super Snowball as offered by Burpee. It stands out as the most valuable Cauliflower. In tests of the Pennsylvania State College it appeared as the best of all strains, maturing not quite so early as Burpee's Fordhook. It is early, with the heads forming all at one time, showing a uniformity of size, shape, and type that is truly astonishing. Beautiful, round, pure white heads with smooth curds. Pkt. 25¢; ½ oz. \$1.00; ½ oz. \$1.75; oz. \$3.00; 4 ozs. \$9.00; ½ lb. \$16.50; lb. \$30.00.

244 Burpee's Best Early

(E) A splendid extra-early Cauliflower, unexcelled for certainty of heading. Of strong growth, with erect, pointed, dark green leaves growing closely about the heads. It is an excellent market and home-garden variety and should be sown so that the heads will mature during either early summer or late fall. Pkt. 15ϕ ; $\frac{1}{4}$ oz. 75ϕ ; $\frac{1}{2}$ oz. \$1.35; oz. \$2.40; 4 ozs. \$7.20; $\frac{1}{2}$ lb. \$13.20; lb. \$24.00.

245 Burpee's Dry Weather O

(E) Though Cauliflower does best in a cool and moist season, in "Dry Weather" we have a variety which is actually drought resistant and will produce heads when all other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a Cauliflower of the highest quality, producing large, pure white heads only a week later than Burpee's Best Early. The heads are considerably larger than those of that famous variety, and are surrounded by more foliage. Individual heads weigh 2 lbs. each. Pkt. 15¢; ½ oz. \$1.45; oz. \$2.50; 4 ozs. \$7.50; ½ 1b. \$13.75; lb. \$25.00.

Cauliflower

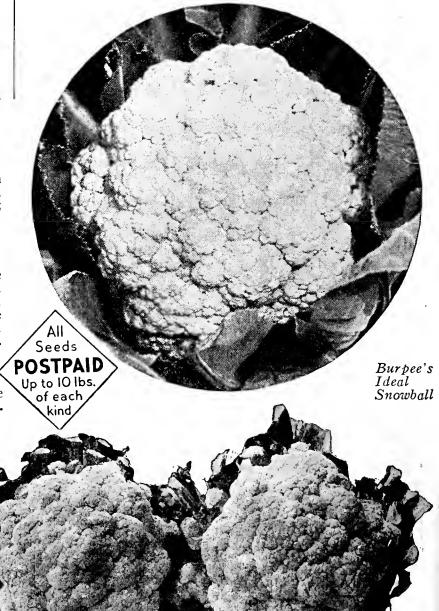

Cauliflower is one of our choicest vegetables. For an early crop, start the seed indoors during March and set into the open by the end of April. For a main or fall crop, sow the seed during June and plant out the latter part of July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. One oz. will give 1000 to 1500 strong plants; ¼ lb. is required for one acre, placing the rows 3 ft. apart and the plants 2 ft. apart in the rows. Early (E) varieties require from 90 to 100 days to mature. Late (L) varieties require over 100 days.

246 Burpee's Fordhook O

(E) The earliest of all varieties we have ever grown. The fact that we named this Fordhook is ample proof of our high esteem for this variety. It will head up well even under unfavorable conditions when most other varieties fail to give a satisfactory crop of good-sized, marketable heads. The plants are dwarf and compact, yet the heads measure fully 6 in. in diameter. They are well rounded and have a fine, closely formed curd of a pure white color. After another season of watching this variety in our trial grounds and comparing it with other varieties we are even more enthusiastic about its qualities, and we wish that every grower of Cauliflower could give it a trial this year. Pkt. 15¢; ¼ oz. 75¢; ½ oz. \$1.35; oz. \$2.40; 4 ozs. \$7.20; ½ lb. \$13.20; lb. \$24.00.

255 Burpee's Ideal Snowball

(E) We claim this new Cauliflower is well-named as it is Ideal in every way. Perhaps its outstanding merit is the large leaves which completely enfold the head and keep it pure white at all times. About 5 days later than Early Snowball. Plants dwarf and compact, and the heads are large, solid and snowwhite. Pkt. 20¢; ½ oz. \$1.00; ½ oz. \$1.75; oz. \$3.00; 4 ozs. \$9.00; ½ lb. \$16.50; lb. \$30.00.

Burpee's Fancy Cucumbers

Make your first sowing of Cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing in late June or early July to furnish Cucumbers for fall use. Pickling Cucumbers usually are sown during midsummer. One oz. of seed plants 100 hills, and 1 lb. of seed is needed to plant one acre. Most varieties mature in about 50 to 60 days after sowing; London or Improved Long Green needs 70 days and White India Gherkin 80 days.

The heads are compact, medium large, and have few outer leaves and most delicious crisp tender hearts blanched to a silvery white even under average garden conditions. Iceberg is exceedingly vigorous and hardy, so that it will withstand quite hot weather. This is the original Iceberg Lettuce introduced by Burpee in 1894. It should not be confused with New York Improved, which is grown in certain western sections under the name Iceberg. Pkt. 10¢; oz. 20¢; 4 ozs. 60¢; ½ 1b. 85¢; 1b. \$1.50; 2 lbs. \$2.75; 5 lbs. \$6.60.

Heads fairly compact and of conical shape

A fine, quick-growing Lettuce with bright green outer leaves and a nearly white heart that is tender, succulent, and crisp. Its luscious refreshing flavor has made it a popular Lettuce with many gardeners. The heads made it a popular Lettuce with many gardeners. The heads are fairly compact and of conical shape. Cos or Romaine Lettuce

Cos Lettuce or Salad Romaine is much esteemed for its fresh crispness and mild flavor. It is widely grown in the northern states during spring and early summer and to provide a crop of tightly folded, elongated heads for fall use. Dwarf White Heart is the earliest variety we know of, and since it is self-closing, does not require tying up. Other Cos forms loose heads which must be tied together with strings in order to blanch them properly and make them tender.

537 Dwarf White Heart We believe this is the most satisfactory of the Cos Lettuce varieties. It is crisp, has a refreshing, snappy flavor, and does not need ying up in order to blanch the heart. Compact, strictly erect plants 10 in. tall, containing a surprising quantity of brittle juicy leaves of light green color and of a most appetizing piquant flavor. It is highly recommended for the home garden and high-class markets. Pkt. $10 \, \varepsilon$; oz. $20 \, \varepsilon$; 4 ozs. $50 \, \varepsilon$; ½ lb. $75 \, \varepsilon$; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50.

O Follow the Bull's Eye O

If you are in doubt as to which varieties to choose, make your selection from those marked with a bull's-eye (3). They represent, in our opinion, those which do well under the most varied conditions of soil and climate. Yet all varieties offered have their valuable qualities. Season of maturity, varied conditions of soil and climate, and market preferences demand that a book as widely distributed as Burpee's Annual include a large number of different varieties.

Burpee's Watermelons

Rich, rather sandy soils produce the finest crops of Watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The plants grow vigorously, and for this reason the hills should be about 6 to 8 feet apart. Place 6 to 8 seeds edgewise, with the eyes downward, in a circle in each hill, and cover ½ inch deep with fine soil. One ounce will plant 20 to 25 hills; 4 to 5 pounds per acre. The early (E) Watermelons mature in 70 to 80 days. The midseason (M) varieties require about 85 days. Late (L) varieties need 90 days or more.

Burpee's Best Peas

Every home garden can easily produce enough Peas to supply the table for many weeks. For a continuous supply of this delicious vegetable, sow the hardier smooth-seeded peas as early in the spring as the ground can be prepared. Follow them with the wrinkled-seeded sorts when all danger of frost has passed. Besides sowing at the beginning of the season varieties which will mature one after another, also make succession sowings at intervals of 10 to 14 days up to about June 1. Peas prefer cool, moist, loamy soil. Cover the seed 1 to 2 inches deep. Provide supports for the tall-growing varieties. One lb. of seed will sow 120 ft. of single row. In drills, 100 to 150 lbs. are required to plant one acre. The extra-early (EE) peas mature in 50 to 55 days; the early (E) varieties require 55 to 60 days; the second-early or main crop (M) varieties need 65 to 75 days until their main picking.

Burpee's Choice Radishes

If your garden includes some of each of the three different classes of Radishes—Spring, Summer, and Winter Radishes—it will easily keep you supplied with this refreshing vegetable practically all year around. All classes are easy to grow. Plant as early in the spring as the ground can be worked, and make succession plantings every 10 days. Where the summers are hot, sow until the middle of May, then stop, but make three more sowings during August. Sow the seed thinly in shallow drills and cover with about one-quarter inch of fine soil. The quality of Radishes depends considerably upon thorough soil preparation, good fertility, and ample moisture. One ounce is sufficient for 100 feet of drill; 8 to 10 pounds of seed are needed to sow one acre planted in drills.

Follow the Bull's Eye (0)

If you are in doubt as to which varieties to choose, make your selection from those marked with a bull's-eye (②). They represent, in our opinion, those which do well under the most varied conditions of soil and climate. Yet all varieties offered have their valuable qualities. Season of maturity, varied conditions of soil and climate, and market preferences demand that a book as widely distributed as Burpee's Annual include a large number of different varieties.

Burpee's Table Turnips

Purple -Top White Globe Turnips develop best during cool weather. In the vicinity of Philadelphia a fine summer crop can be grown from seed sown early in the spring. Most Turnips, however, are sown for a fall crop any time from the middle of July until about August 20. Sow thinly in rows not less than 18 in. apart and cover with ½ in. of fine soil. Turnip seed often is broadcasted between the rows of corn or in the cultivated orchard. Early varieties are sown as a catch crop after early Potatoes. One oz. will sow 400 ft. of drill. 1½ to 2 lbs. of seed are needed per acre. For broadcasting, 4 to 5 lbs. are needed for the same area. The early (E) varieties require 45 to 55 days and the late (L) varieties 60 to 75 days to reach maturity. 1163 Purple-Top White Globe o (E) This well-known Turnip is a great favorite and is sometimes sold under the name of Red-Top White Globe. Burpee's Famous Lawn Grass

The best time to start your lawn, or to repair it, is during the cool weather of early spring, for that is when grass grows most successfully and gets its strength to withstand the hot, dry weather that comes later. Why not plan now to have the luxurious lawn that will add so much to the beauty of your home? All you need is a rake, a roller, perhaps some top soil, and good seed. Wherever your lawn looks bare or ragged, loosen the soil with a steel rake. Fill in holes with garden soil, rake smooth. Then reseed, rake the seed in very lightly, and roll. Water with a fine spray. You will be wonderfully repaid for very little labor and expense.

Flower Gardens

Thousands of people from all parts of the country visit our gardens every year, where gorgeously colored flowers are in bloom from earliest spring until latest fall.

Realization of the constant need for improvement in the seeds that mean so much to the gardens of America led to the establishment of Burpee's great Seed Farms, where we can grow, under our own supervision, just the kind of seeds that meet our ideals of highest quality.

What you see in Bloom

Spring—Soon after the snows are gone you will find over 100,000 Crocus, Hyacinths, Tulips, Narcissus and other similar flowers in full bloom.

Summer—Before the spring flowers are gone the Hardy Perennials are in bloom, followed by Gladiolus, Poppies, and scores of other delightful varieties.

Fall—Dahlias, Salvias, Celosias and Perennials in their dazzling color scombine with many other flowers to make our Gardens a sight long to be remembered.

Famous as the largest and most complete trial grounds in America, Fordhook Farms are devoted solely to serving the needs of our customers. Many special strains of Burpee vegetables and flowers are grown here. After a visit to Fordhook, Luther Burbank wrote us: "Your Fordhook Trial Grounds were the best of all my eastern object lessons, and I had many. I had no idea of their extent and value, not only to yourself, but to your customers, and eventually to everyone who cultivates the soil."

Beautifully located on a shady eminence overlooking a broad, sloping valley is the Burpee homestead. Thus, constant personal attention can be given to the various activities at the Farms.

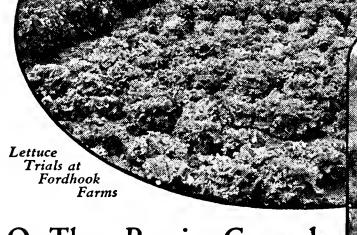

Fordhook Farms are located at beautiful Doylestown, Pa., 24 miles directly north of Philadelphia. It is easy to get to Fordhook from all directions. Many customers and friends traveling by auto stop off at Fordhook Farms. We would be glad to have you visit The Burpee Flower Gardens. There is always something of interest for garden lovers to see from early spring until frost.

Acres of Beautiful Petunias at Floradale

"The California Home of Flowers"

The first Spencer Sweet Pea in existence was brought to America by W. Atlee Burpee and grown in California. For the further development of Sweet Peas, which had long been a Burpee specialty, Floradale Farms were established. Large areas at Floradale are now devoted to the cultivation of many varieties of flowers, which here produce seeds that are healthier and hardier than could be grown elsewhere. Such vegetables as here develop the best and strongest seeds are also grown extensively.
